Skills

Languages: Java, Python, SQL, R, Julia, HTML, CSS, C, C++

Frameworks: React, Next.js, Node.js, Express.js, Tailwind CSS

Tools: VS Code, R Studio, Git, Eclipse, IntelliJ, Jupyter Notebook, Figma, Tableau, Anaconda, LaTeX

Work Experience

Data Analyst (Co-op) — DarkVision Technologies Inc.

Jan 2026 – Present

- Analyzed **2,000+ weekly ultrasound pipeline datasets** to classify and validate features and anomalies, using **Python** automation to improve analysis throughput.
- Built a **full-stack ILI Reference Library** using **React**, **FastAPI**, **OpenAI CLIP**, and **Qdrant vector search** with **SharePoint** storage, letting analysts upload anomaly examples and **instantly retrieve visually or textually similar historical cases** to standardize classification and QC decisions.
- Collaborated with the **ML research team** on model training for a newly launched product, led **internal QA across 7 releases (20+ bugs/UX fixes)**, and co-developed **Power BI dashboards** for analyst KPIs, project progress, and client anomaly reportability by category with live updates.

Vice-President Technical — UBC Quantum Club

Sept 2025 – Present

- Oversee digital platforms, including website and Discord, supporting 290+ members in learning and collaboration.
- Manage technical logistics for events and ensure smooth operation of hybrid workshops in quantum computing.

Technical Projects

Rackd | Next.js, TypeScript, Tailwind CSS, Neon PostgreSQL, NextAuth, Vercel

- Built a **full-stack inventory dashboard** for clothing resellers to manage **multi-platform listings**, sales, and profit tracking, with search, filters, analytics, and item detail views
- Designed a **relational PostgreSQL schema** on **Neon** and **REST API routes** for CRUD, mark-as-sold, and delist tracking with **persistent storage** and **user authentication**
- Developed **cross-platform delist alerts** to flag items still active on other marketplaces after a sale, **reducing double-selling risk**

Leftover Love – Food Sharing Platform | React, TypeScript, TailwindCSS, Context API, OpenStreetMap

- Built a scalable web app to connect food providers with recipients, featuring secure role-based authentication, real-time food listings, emergency request handling, and map-based location services.
- Optimized performance with **lazy loading**, **custom caching (60% fewer API calls)**, and **code splitting (40% faster load time)**, while ensuring accessibility and mobile responsiveness.

Digital Health Technologies Study | Python, MongoDB, SQL

- Led a data-driven study on electronic prescription (eRx) adoption across U.S. states, analyzing over 4 million healthcare records using **Python**, **SQL**, and visualization libraries (**Matplotlib**, **Seaborn**).
- Performed statistical testing (**t-tests**, **Pearson correlation**) and urban-rural/provider-type stratification to uncover disparities in eRx usage across geography and medical roles (NPs vs. PAs).
- Delivered actionable insights for digital health policy, revealing gaps in rural infrastructure and recommending tailored implementation strategies for improved healthcare equity and efficiency.

Hackathons & Datathons

OrbitX Datathon - UBC Orbit (Winner)

Apr 2025

- Analyzed NASA MODIS/VIIRS satellite wildfire data and Canadian National Fire Database burn area boundaries to identify high-risk wildfire zones in Alberta using machine learning.
- Integrated climate, vegetation, and population datasets to assess wildfire patterns and propose innovative early warning solutions for community preparedness and response.

GNEC Hackathon 2025

May 2025

- Engineered a full-stack legal assistance platform featuring an AI-powered chatbot (Mr. Hootsworth) that provides real-time legal guidance and resource recommendations, resulting in a 48% improvement in user engagement.
- Developed an anonymous peer-support community and a lawyer-matching system connecting users with legal professionals, aligned with SDG 5 (Gender Equality) and SDG 10 (Reduced Inequalities).

Education

University of British Columbia

Expected Graduation: May 2028

Bachelor of Science in Computer Science (86%)
